

Advanced Rework Technology Ltd

Advanced Certified Interconnect Designer-CID +

CID+, Enhanced Certified Interconnect Designer programme is a valuable professional credential recognised throughout the electronics industry based on several critical IPC documents that link design principles to the end product use of the printed board assembly.

Although the CID designation is an import recognition for a designer, continuing education becomes necessary to maintain a designer's effectiveness. This advanced programme covers several key goals beyond CID.

The CID+ programme is designed for those who design PCB's as well as those who need knowledge of the IPC Design Standards.

The CID+ programme build on hands-pm experience and requires an element of home study prior to the course. A high degree of competency is required to be demonstrated for this programme. 3-5 years of design experience is recommended.

Available levels of training:-
Enhanced Certified Interconnect Designer-CID+

Course duration:-
3 days

Subjects covered:-

- Design considerations
- Materials
- Printed Board Characteristics
- Standards to meet Fabrication and Assembly
- Electrical Parameters
- Component Requirements
- Documentation

Upon course completion students will receive an industry recognised certification and registration to the list of IPC Certified IPC Designers.

Prerequisites: - CID+ students must be currently CID certified.
